DAST Rollout and DevSecOps Dashboard for Secure SDLC

SPACE

Supported Thales Alenia Space Italia in implementing a Dynamic Application Security Testing (DAST) solution to enhance the security of in-house software. Conducted a comparative assessment of leading vendors, aligned with Gartner standards, and delivered a customized architecture and implementation plan. Oversaw system integration on VMWare infrastructure and validated performance through live scans and technical benchmarks. Provided tailored training and documentation to ensure full autonomy in secure application lifecycle management.

As part of the initiative, developed the **CodeShield Dashboard**, a DevSecOps monitoring solution integrating security KPIs into the CI/CD pipeline and GitLab projects. The dashboard enables automated configuration checks, baseline enforcement, and real-time visibility over AppSec maturity across projects.
