# NIS 2 Compliance Assessment

## UTILITIES

Conducted a deep gap analysis to assess existing Information Security Management System (ISMS) against the ISO 27001:2013 standard. Developed a targeted remediation plan that addressed identified gaps. The result was a robust ISMS aligned with ISO 27001 requirements, enhancing the organization's cybersecurity posture.

Provided an updated gap analysis specific to ISO 27001:2022, ensuring a smooth migration from the 2013 version. Our tailored approach dealt with new concepts defined in the ISO 27036 for supply chain risk management, developing comprehensive questionnaires to assess supply chain stakeholders.

By evaluating risk scenarios holistically, insights into critical processes, dependencies, third party and recovery priorities have been gained. Developed risk mitigation strategies, ensuring resilience in the face of cyber threats.
